PROFESSIONAL SUMMARY

Data Science graduate specializing in predictive modeling and interactive visualization. Proficient in Python, SQL, and machine learning frameworks to deliver end-to-end analytical solutions. Delivered freelance ML deployments and secured 1st prize in competitive hackathons, transforming complex datasets into actionable business intelligence and production-ready applications.

TECHNICAL SKILLS

Languages & Databases: Python, SQL, Excel.

ML & Data Science: scikit-learn, Random Forest, XGBoost, Logistic Regression, Feature Engineering, Model Evaluation, Cross-Validation.

Data & EDA: pandas, NumPy, matplotlib, seaborn, Statistical Analysis, Data Wrangling, Exploratory Data Analysis.

Visualization: Tableau, Power BI, Streamlit.

Tools & Platforms: VS Code, Jupyter Notebook, Google Colab, GitHub (Git), Cursor, Claude Code.

EXPERIENCE

Freelance Data Analyst / ML Developer

2026

Independent Client Projects

- Built a Random Forest classifier on land documentation data with imbalanced class distribution; lifted Precision by 33% (0.22 to 0.30) and improved F1-score 3x (0.05 to 0.16) over the Logistic Regression baseline.
- Deployed an interactive Streamlit dashboard for real-time land approval prediction, giving clients direct access to model outputs without writing any code.
- Analyzed a survey-based gaming addiction dataset; extracted the top 5 behavioural risk indicators through feature selection using Random Forest (63% accuracy on imbalanced data) and presented findings in a Streamlit dashboard for stakeholder review.

Student Operations Assistant, Dept. of Data Science

2024 – 2026

The American College, Madurai

- Created a department data tracking system using Excel and Google Sheets, cutting weekly report generation time by 40% across a 15-member team.
- Coordinated documentation for 5+ departmental events per year, eliminating last-minute handoff gaps and standardizing cross-team workflows.

Web & Application Developer

2026

DATA VAGANZA, Department Symposium, The American College

- Designed and shipped the official event website and registration application for 200+ participants, maintaining 100% uptime across the full event window.
- Managed the complete deployment lifecycle from local development to live production with zero rollbacks.

PROJECTS

VAULT-Aegis: AI Security Gateway

- Designed a zero-trust security layer for LLM deployments as part of a hackathon team, covering threat vectors from the API gateway through to the inference pipeline.
- Implemented prompt injection and jailbreak defence, PII sanitization across 7+ data types, and OWASP API scanning; reduced simulated attack success rate to near zero.
- **Won 1st Prize** at the Thiagarajar College of Arts & Science Hackathon, Madurai.

Video Games Sales Analysis & Prediction

- Profiled **16,000+ game titles** across NA, EU, JP, and Global markets through EDA; surfaced platform dominance trends and genre-level demand patterns using matplotlib and seaborn.
- Engineered a game age feature and applied one-hot encoding across platform and genre dimensions; benchmarked Linear Regression, Random Forest, and XGBoost Regressors for global sales prediction.
- Selected Random Forest as the final model ($R^2 = 0.84$, $MAE = 0.017$, $RMSE = 0.836$) and deployed a prediction system accepting platform, genre, year, and publisher as inputs.

Laptop Price Prediction

- Trained a Random Forest regression model across 1,000+ device configurations for laptop price prediction, achieving R2 = 0.88 on the held-out test set.
- Built an interactive feature importance dashboard to help stakeholders understand which device specs drive pricing, enabling data-backed procurement decisions.

London Bike Ride Analysis

- Processed multi-year historical ride data to surface seasonal and weather-driven demand patterns across London's bike-share network.
- Quantified 23% higher weekend ridership during summer months and visualized findings in Tableau for capacity planning use.

EDUCATION

Bachelor of Science (B.Sc.) in Data Science, 2023 to 2026

The American College, Madurai, CGPA: 8.5, Affiliated to Madurai Kamaraj University

Relevant Coursework: Machine Learning, Statistics, DBMS, Data Analysis, Python, Data Mining, Big Data Analytics, AI.

CERTIFICATIONS

Google Analytics, Google	2025
Prompt Engineering, AWS	2025
AI Agents, Hugging Face	2025
Data Visualization Virtual Internship, TATA	2024
Data Analytics and Visualization Virtual Internship, Accenture	2025
Data Analysis, Microsoft & LinkedIn	2025
Generative AI, Microsoft & LinkedIn	2025
